

Solar Thermal Hot Water Hardware Package

Custom Designed for Two to Four Person Households

Why Choose an EcoBilt Energy Systems Package?

- Designed to be the simplest and most cost effective way to implement solar thermal into any household.
- Perfectly matched components insure maximum energy harvest and hot water delivery.
- Ready to install and require very few user provided components – Just add copper pipe, joint fittings, pipe insulation and wire.

Available Options and Upgrades:

- Tilt or rail mounting brackets for installing collectors at a custom pitch.
- Multiple storage tank options for indirect or direct gas fired water heaters.
- DC circulation pump and paired photovoltaic (PV) module for net zero operation.

EcoBilt Energy Systems is available for the installation of any product offering.

The 2 to 4 Person Household Solar Thermal Hardware Package Includes:

- Two 4' x 7' solar thermal hot water collectors each with standard 10 year warranty.
- 80 gallon single HEX storage tank with 4,500 w electric element for reserve heating.
- System controller with easy to read LCD and user-friendly controls.
- Temperature and pressure gauges for system performance and status monitoring.
- Thermostatic mixing valve for anti-scald protection.
- Pressure and temperature relief valves and expansion tank for insurance against elevated system temperatures.
- High quality non-toxic propylene glycol.
- Detailed CAD schematic showing system and component layout
